

M2M X-Intelligence Platform

AI-Driven Modernization,
Integration & Transformation Engine

Modernization Reinvented.

Turn enterprise complexity into a practical modernization journey. Connect application transformation, integration and human-guided AI around your existing technology stack.

CORE CAPABILITIES

Application modernization

Java / WebSphere / Liberty

Assess Java workloads, shape migration paths and evolve applications for modern runtime environments.

Connected integration

MQ / ACE / Kafka / APIs

Connect messaging, events and APIs across enterprise systems to support coherent transformation.

Human-guided Copilot

AI assistance with human oversight

Support analysis, solution design and delivery. People review recommendations and approve consequential actions.

JOURNEY XPERIENCE

1

Diagnose

Assess systems and priorities.

2

Engage

Align stakeholders and goals.

3

Ideate

Design options and a roadmap.

4

Implement

Deliver validated changes.

5

Optimize

Measure, learn and improve.

DESIGN PRINCIPLES

Integrate with your existing stack. Build on current platforms and workflows through incremental, interoperable changes.

Design for enterprise security. Make access control, data protection, traceability and governance part of solution design. Validate controls for each deployment.

From assessment to continuous improvement.

One connected journey. Human expertise at every critical decision.
